

## Aluminium Extraction: Fact file

World production	19.5 million tonnes per year
UK production	250,000 tonnes per year
Manufacture	Hall-Héroult process
Raw material	Aluminium oxide, purified from bauxite ore. The ore is found in Australia, Jamaica, Brazil and Guinea.

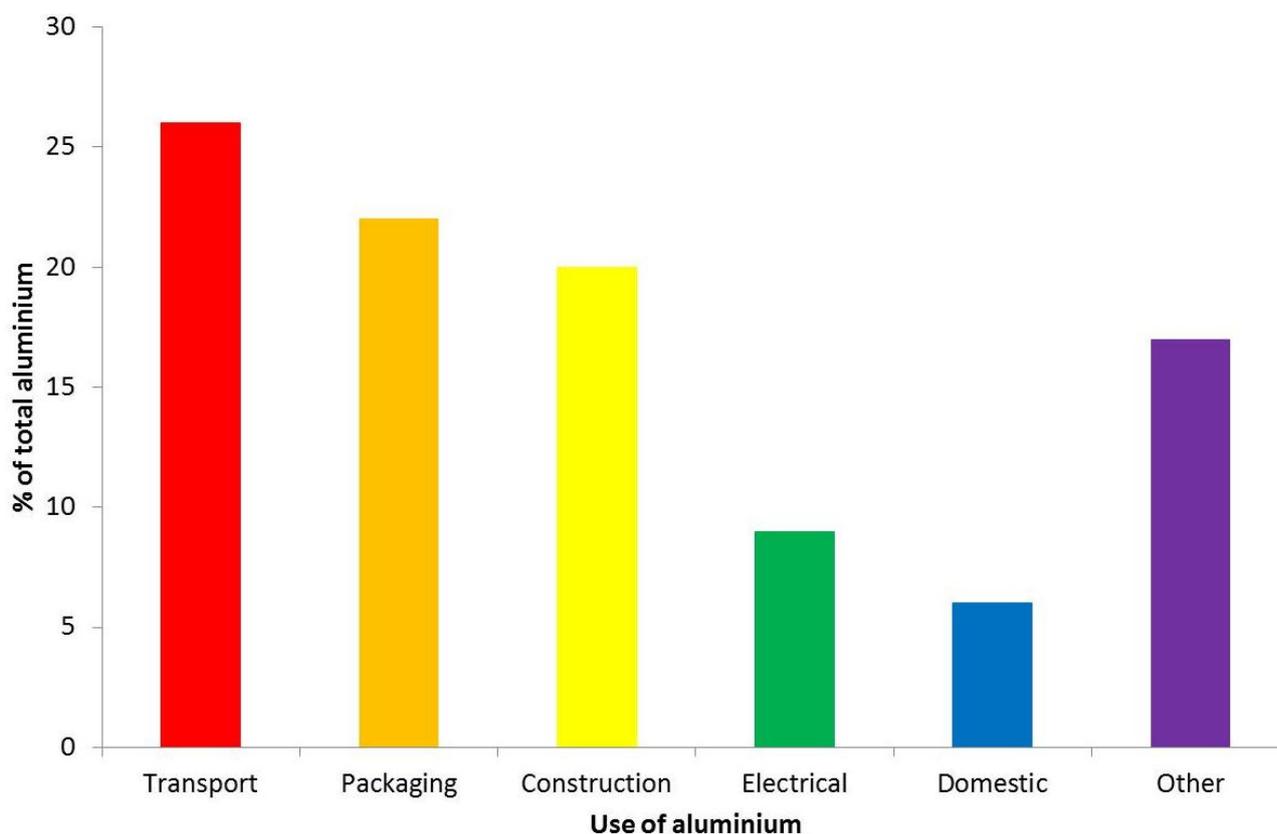

Figure: Chart to show the percentage amount of aluminium used for different sectors.

Table: Table to show the percentage amount of aluminium used for different sectors (as shown above).

	Transport (eg bodies of buses and trains)	26%
	Packaging (eg drinks cans)	22%
	Construction (eg window frames, garage doors)	20%
	Electrical engineering	9%
	Domestic appliances	6%
	Other	17%
