## Preparation of diammonium hydrogenphosphate

Teacher and technician sheet

## Equipment and materials

Each student or pair of students will require:

- Evaporating basin
- Tripod and gauze
- Bunsen burner
- $10 \mathrm{~cm}^{3}$ pipette
- Burette and stand
- $100 \mathrm{~cm}^{3}$ conical flask
- Filter funnel, filter paper and conical flask (to stand funnel on)
- Glass rod.
- $1 \mathrm{~mol} \mathrm{dm}^{-3}$ phosphoric acid
- $1 \mathrm{~mol} \mathrm{dm}^{-3}$ ammonia solution
- Methyl orange indicator solution

Make sure students wear eye protection. $1 \mathrm{~mol} \mathrm{dm}^{-3}$ ammonia solution and $\mathrm{mol}_{\mathrm{dm}}{ }^{-3}$ phosphoric acid are irritants to the eyes, lungs and the respiratory system. Make sure to work in a wellventilated laboratory.

## Further suggestions

Students could test the effectiveness of their product as a fertiliser.
