

Using the triangle

Education in Chemistry

July 2019

rsc.li/2XhYN9Q

Fill in each part of the triangle. Start with what you can see, the macroscopic. Next, describe what you can't see. This is the sub-microscopic. Finally, give an example of how we represent what we've seen. This is the symbolic, it could be a word equation or formula.

MACROSCOPIC – what we can see

?

SUB-MICROSCOPIC – what we can't see, smaller than we can observe

SYMBOLIC – what we use to represent what we've seen
