Chapter 1 Alternative conceptions in chemistry teaching.....	1
Students' alternative ideas.....	1
What learners don't know about science.....	1
What learners think they know about science.....	2
Students as scientists?.....	2
The nature of learners' ideas.....	3
The significance of learners' ideas.....	3
Describing learners' ideas.....	4
Some examples of alternative conceptions.....	5
Alternative conceptions in chemistry.....	5
An example of an alternative framework.....	7
Notes and references for Chapter 1.....	9
Chapter 2 Concepts in chemistry.....	11
What are chemical concepts - and why are they hard to learn?.....	11
Forming concepts - noticing similarities and differences.....	12
Learning rule - based concepts.....	19
Providing clear definitions.....	20
Defining key concepts in chemistry.....	21
Elements and compounds.....	21
Atoms and molecules.....	23
Physical change and chemical change.....	25
Implications for teaching chemical concepts.....	26
Notes and references for Chapter 2.....	27
Chapter 3 The structure of chemical knowledge.....	31
Concepts take their meaning within knowledge structures.....	31
Formal and personal ways of structuring chemical knowledge.....	31
The conceptual structure of chemistry.....	31
Representing knowledge structures: the concept map.....	33
Circular definitions or spiral curriculum?.....	34
Initiating a learning spiral.....	36
Concept maps as teaching tools: context analysis.....	36
Dimensions of cognitive structure.....	38
Concept maps as diagnostic tools: eliciting knowledge structures.....	41
Introducing concept mapping.....	41
A concept map for acids at lower secondary level.....	42
A concept map for the Periodic Table at upper secondary level.....	45
Concept maps as learning tools: learning styles.....	47
Concept maps as revision tools: metacognition.....	48
Notes and references for Chapter 3.....	49
Chapter 4 Overcoming learning impediments.....	53
The learning - doctor.....	53
Obstacles to learning.....	53
A hierarchy of obstacles.....	53
Barriers to effective communication.....	55
What do you mean by a covalent bond?.....	55

The class from Babel .....	56
How do we make sense of what people say to us? .....	56
Constructing knowledge .....	57
Talking in code .....	57
Learning impediments .....	58
Null learning impediments - causes of misunderstanding .....	58
Substantive learning impediments - causes of misunderstanding .....	58
Two types of null learning impediments .....	59
Two types of substantive learning impediments .....	59
Applying ideas about learning impediments in the classroom .....	61
Common and not so common alternative conceptions .....	61
The most important diagnostic tool: the teacher's sensitivity .....	62
Keeping a diary of learning impediments .....	61
Notes and references for Chapter 4 .....	64
Chapter 5 Scaffolding learning in chemistry .....	67
The problem of the optimal level of difficulty .....	67
A limited register .....	69
Seeing chemistry at a different resolution .....	69
Building needs foundation and scaffolding .....	70
Scaffolding learning (1): trust me I'm a teacher .....	70
Scaffolding learning (2): being in the zone .....	71
Scaffolding learning (3): what does scaffolding mean in practice? .....	71
Preparing teaching materials: DARTs .....	72
Preparing teaching materials: scaffolding PLANKs and POLES .....	73
Principles behind POLES and PLANKs as learning materials .....	74
The need for scaffolding PLANKs in learning chemistry .....	74
An example of a PLANK .....	75
Examples of using scaffolding POLES in teaching chemistry .....	78
Scaffolding POLES chemical explanations .....	79
Modular explanations .....	79
Notes and references for Chapter 5 .....	83
Chapter 6 Chemical axioms .....	85
The chemist's creed .....	85
Material, energy and substance .....	85
Elements, compounds and mixtures .....	85
Defining elements and compounds .....	89
Models in teaching science .....	89
The particle model of matter .....	90
Defining atoms .....	92
Student confusing over molecules and ions .....	93
Defining molecules .....	94
Applying the molecular model .....	95
Chemical change and physical change .....	97
Conservation in chemistry .....	100
Chemical stability .....	102
Students' ideas about chemical stability .....	102
Relating stability to reactivity .....	104
Notes and references for Chapter 6 .....	106
Chapter 7 Chemical structure .....	109
The structure of the atom .....	109
The principles determining atomic structure .....	109
Learners' ideas about the atomic nucleus .....	110
Learners' ideas about atomic structure .....	111
Conservation of force: a common alternative conception .....	112
Learning by analogy – the example of the atom .....	112

Learners' ideas about orbitals .....	115
Depicting molecular structure .....	117
Challenging students' expectations .....	122
Notes and references for Chapter 7 .....	122
Chapter 8 Chemical bonding .....	125
The full shells explanatory principle .....	125
When is a chemical bond not a force? .....	125
Multiple models for chemical bonds .....	127
Students' multiple conceptual frameworks for bonding .....	127
Student definitions of bonds: the bonding dichotomy .....	128
Covalent bonds as electron sharing .....	128
The polar bond .....	129
The ionic bond as electron transfer .....	131
Is the metallic bond ionic, covalent, or just damp at the edges? .....	133
Intermolecular interactions as bonds, or just forces? .....	135
Developing understanding of chemical bonding .....	137
Notes and references for Chapter 8 .....	138
Chapter 9 Chemical reactions .....	141
Describing chemical reactions .....	141
Student difficulties with word equations .....	141
Types of reactions .....	144
Why do reactions occur? .....	145
How do reactions occur at the molecular level? .....	148
Students' ideas about the mechanism of ionic precipitation .....	149
How do reactions occur at the electronic level .....	151
Notes and references for Chapter 9 .....	154
Chapter 10 Constructing chemical conceptions .....	155
Principles of constructing knowledge in the classroom .....	155
Vignette 1: The case of the deviant charge .....	156
The importance of diagnosing learners' ideas .....	157
Building on the available foundations: only connect .....	158
Teachers' subject knowledge .....	158
Textbooks as flawed authorities .....	159
Unhelpful descriptions of macroscopic phenomena .....	160
Unhelpful descriptions of the molecular world .....	160
Confusing the macroscopic and the molecular .....	162
Encouraging on atomic ontology .....	163
The example of ionic bonding .....	164
Problems of changing conceptions:	
challenging versus developing students' ideas .....	166
Planning to avoid learning impediments .....	167
Learning from pedagogic learning impediments .....	168
Vignette 2: Never assume .....	169
Making the unfamiliar familiar .....	170
Using analogies to anchor to the conceptual bedrock .....	170
Vignette 3:	
'The MCG analogy is analogous to the Yankee Stadium analogy' .....	171
Vignette 4: The parable of the molecular scissors .....	172
Notes and references for Chapter 10 .....	175
Index .....	179
