<p>1. Rearrange the equation to make y the subject.</p> $x = \frac{y - 1}{2}$	<p>2. Turn over this piece of paper and measure out a line 20 cm long.</p> <p>Along this line, make a scale which goes from 0 to 100.</p> <p>What value does 1 cm on the scale represent?</p>	<p>3. Rearrange the equation to make Q the subject.</p> $\Delta T = \frac{Q}{mC}$	<p>4. A rate equation is given below:</p> $rate = 0.005 \times conc$ <p>A graph is plotted with $conc$ on the x-axis and $rate$ on the y-axis.</p> <p>a) What is the gradient of the line?</p> <p>b) What is the y-intercept?</p>																				
<p>5. Sketch a graph of $y = 2x - 1$.</p> 	<p>6. Determine the y values for the function $y = 3(x + 2)$.</p> <table border="1" data-bbox="663 1061 1104 1220"> <thead> <tr> <th>x</th> <th>y</th> </tr> </thead> <tbody> <tr> <td>0</td> <td></td> </tr> <tr> <td>1</td> <td></td> </tr> <tr> <td>2</td> <td></td> </tr> <tr> <td>3</td> <td></td> </tr> </tbody> </table>	x	y	0		1		2		3		<p>7. Sketch a graph of $rate = 2 \times conc$ and label the axes.</p> 	<p>8. Determine the $rate$ values for the function $rate = 1000 \times conc^2$.</p> <table border="1" data-bbox="1590 1061 2031 1220"> <thead> <tr> <th>$conc$</th> <th>$rate$</th> </tr> </thead> <tbody> <tr> <td>0.01</td> <td></td> </tr> <tr> <td>0.05</td> <td></td> </tr> <tr> <td>0.10</td> <td></td> </tr> <tr> <td>0.20</td> <td></td> </tr> </tbody> </table>	$conc$	$rate$	0.01		0.05		0.10		0.20
