Answering exam questions
Detect, recall, solve
Detect, recall, solve

1. Detect
2. Recall
3. Solve

- **Detect** the command words and information in the question (highlight them)
- **Recall** the relevant information you know
- **Solve** by linking the information in the question with your knowledge (use logical bullet points)
Q1 Try it yourself

1. Detect
2. Recall
3. Solve

The Earth's early atmosphere was different to Earth's atmosphere today.

Scientists think that the Earth's early atmosphere was like the atmosphere found on Venus today.

**Table 2** shows the amounts of carbon dioxide and oxygen in the atmospheres of Venus and Earth today.

<table>
<thead>
<tr>
<th>Gas</th>
<th>Percentage (%) in Venus' atmosphere today</th>
<th>Percentage (%) in Earth's atmosphere today</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbon dioxide</td>
<td>96.50</td>
<td>0.04</td>
</tr>
<tr>
<td>Oxygen</td>
<td>0.00</td>
<td>20.95</td>
</tr>
</tbody>
</table>

The percentages of carbon dioxide and oxygen have changed from Earth's early atmosphere to Earth's atmosphere today.

Explain the processes that led to these changes.

[6 marks]
Detect and highlight the command words.

Recall: The carbon cycle. What processes change the amount of CO₂ in the atmosphere?

Solve: Link the information and your knowledge. Use ‘because’ to link cause and effect. Eg. This difference exists because this process occurred. (logical, bullet points)
## Mark scheme

</tbody>
</table>

### Indicative content

#### changes
- carbon dioxide has decreased
- oxygen has increased

#### processes
- volcanic activity released water vapour
- the water vapour condensed to form oceans
- carbon dioxide dissolved in oceans
- carbonates produce sediments
- carbon locked up in sedimentary rocks
- algae and plants evolved / appeared
- algae / plants absorbed carbon dioxide
- by photosynthesis
- which also released oxygen
- carbon locked up in fossil fuels
Q2 Try it yourself

1. Detect
2. Recall
3. Solve

0 1, 3 Describe a method to make pure, dry crystals of magnesium sulfate from a metal oxide and a dilute acid.

[6 marks]
Detect and highlight the command words.

Detect and highlight the command words.

Which metal oxide and dilute acid will you need to use?

List the equipment you will need.

What processes need to happen to form dry salt crystals?

Give instructions in a logical order, you may use bullet points
## Mark scheme

### Indicative content

- use magnesium oxide and sulfuric acid
- add sulfuric acid to a beaker
- warm sulfuric acid
- add magnesium oxide
- stir
- continue adding until magnesium oxide is in excess
- filter
- using a filter paper and funnel
- to remove excess magnesium oxide
- heat solution in an evaporating basin
- to crystallisation point
- leave to crystallise
- pat dry with filter paper

Credit may be given for diagrams
