A nanotechnologist finds ways to make materials nanoscale. Nanoscale is a very small scale. This is important for lots of jobs, such as:
- holography and optics technicians
- manufacturing engineers
- market development managers
- mechanical engineers
- optical engineers.

Key Learning and Science Skills needed:
- Be creative when designing, making and evaluating new foods.
- Set up practical enquiries when designing and making foods and communicate findings to customers.

This is Heston Blumenthal. He is a food scientist who uses kitchen chemistry to create innovative foods. He is also a Fellow of the Royal Society of Chemistry.

Medicinal chemists mix chemicals in different states, such as gas, liquids and solids, to make medicines that treat illness and disease. They are interested in using science to help others. Medicinal chemists work in different places, including:
- laboratories
- pharmacies
- hospitals.

Key Learning and Science Skills needed:
- Resilient in setting up investigations to find medicines that will treat illness or disease.
- Observe carefully to investigate how the chemicals might treat illness or disease.

This is Gunda Georg. She is a medicinal chemist at the University of Minnesota, US.
