A soil scientist studies the soil under our feet. This is important in lots of industries, such as:
- farming
- environmental protection
- building and landscaping.

Key Learning and Science Skills needed:
- Interest in the natural world and enjoy being outdoors learning about soils and how they help a wider environment.
- Perform land and soil surveys followed by tests to find out soil types and their uses.

This is Aga. She is a soil scientist currently working in Ireland. Aga has researched many aspects of soil science with the most recent being soil health. Aga enjoys sharing her passion with audiences from primary school pupils to farmers.

A palaeontologist studies fossils (including dinosaurs!) to find out about the history of life on Earth. Palaeontologists work in different places, including:
- museums
- universities
- outdoors excavating fossils.

Key Learning and Science Skills needed:
- Patience and resilience when carefully using tools to find and uncover fossils.
- Observe closely using identifying and classifying (sorting and grouping) to find new fossils and know which dinosaur they belonged to.

This is Xu Xing. He is a palaeontologist working in China. He has named more dinosaurs than any other living palaeontologist.

Would you like to use your learning about rocks and soils when you are older? Maybe you’d like to be a geologist or a palaeontologist? I wonder if there are more jobs that use rocks and soils learning?
