

# Using Earth's resources

The Earth has many different resources that we use for 🔥 warmth, 🏠 shelter, 🌾 food and 🚗 transport.

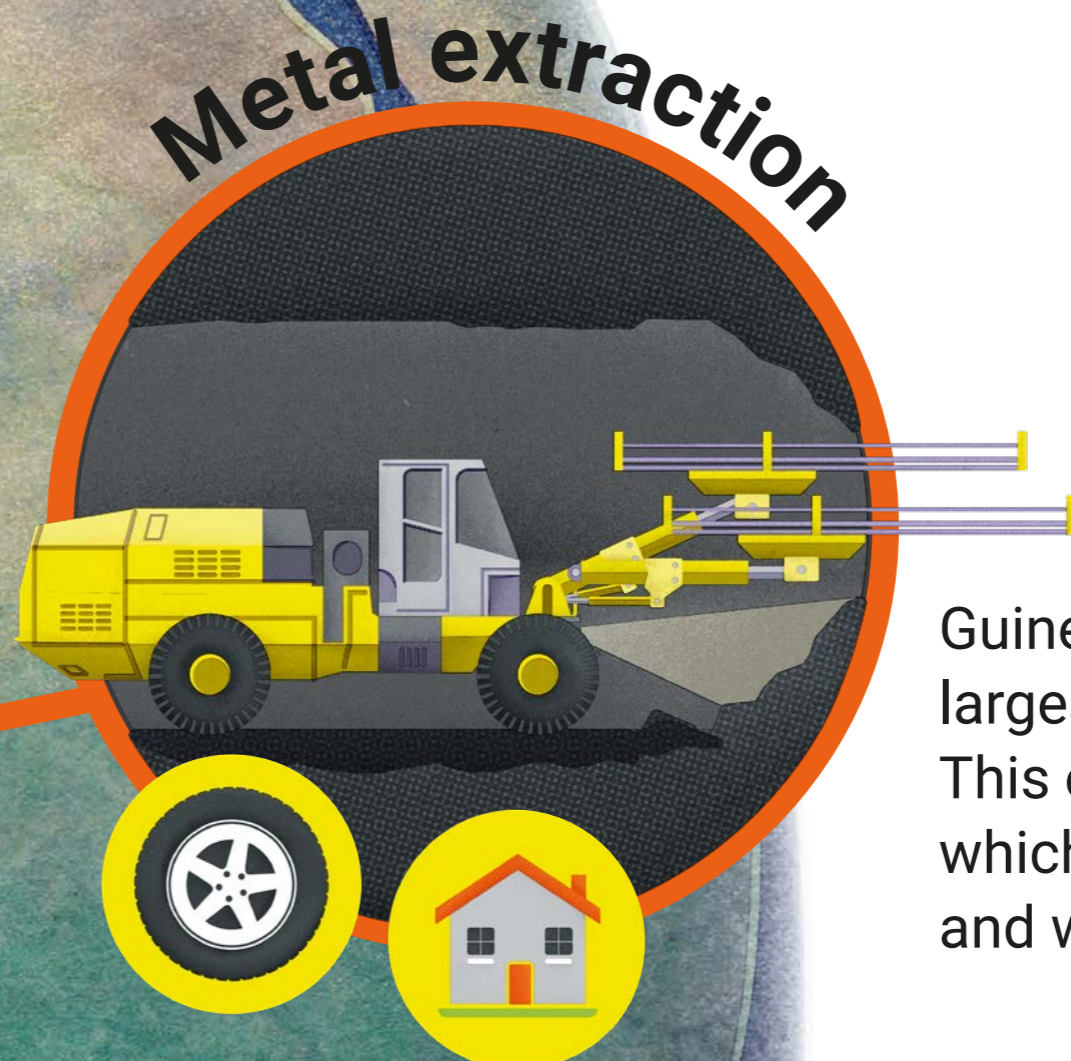

Chemists in Germany developed the **Haber process**, which we use to make **ammonia** for **fertilisers**.

Saudi Arabia is the second largest oil **producer**. Factories **refine** the oil and then we use it as **fuels** for cars and planes, and to heat our homes.

Mined mostly in Spain, **slate** is a **metamorphic rock** we use as roofing for houses.

Guinea has the world's largest **bauxite reserves**. This **ore** contains **aluminium**, which we use to make cars and window frames.
