# Structure and bonding: Frayer models

# Frayer models

Frayer models are a simple but effective way to develop learners' understanding of a new piece of vocabulary. You will see what your learners already know and identify any misconceptions they have.

There are four stages learners can work through, but you can adapt this model to best suit your learners. You can guide learners through all quadrants, but particularly quadrant 2 works best as a teacher-led discussion.

Find more guidance, including tips, adaptations and further reading, in the teacher notes:

**1. What does the word molecule mean to you? Where have you come across this word (or parts of this word) before?**

Here are some ideas:

- The word molecule contains 'mol', like molar teeth, and the animal called a mole.
- Molecule contains 'cule', like miniscule which means really small.

**2. What do we know about molecules?**

Molecules are made up of atoms.

They can be big (can you think of an example?) or small (can you think of an example?)

Molecules contain chemical bonds.

## Molecule

**4. Draw a ring around the images which represent molecules below**

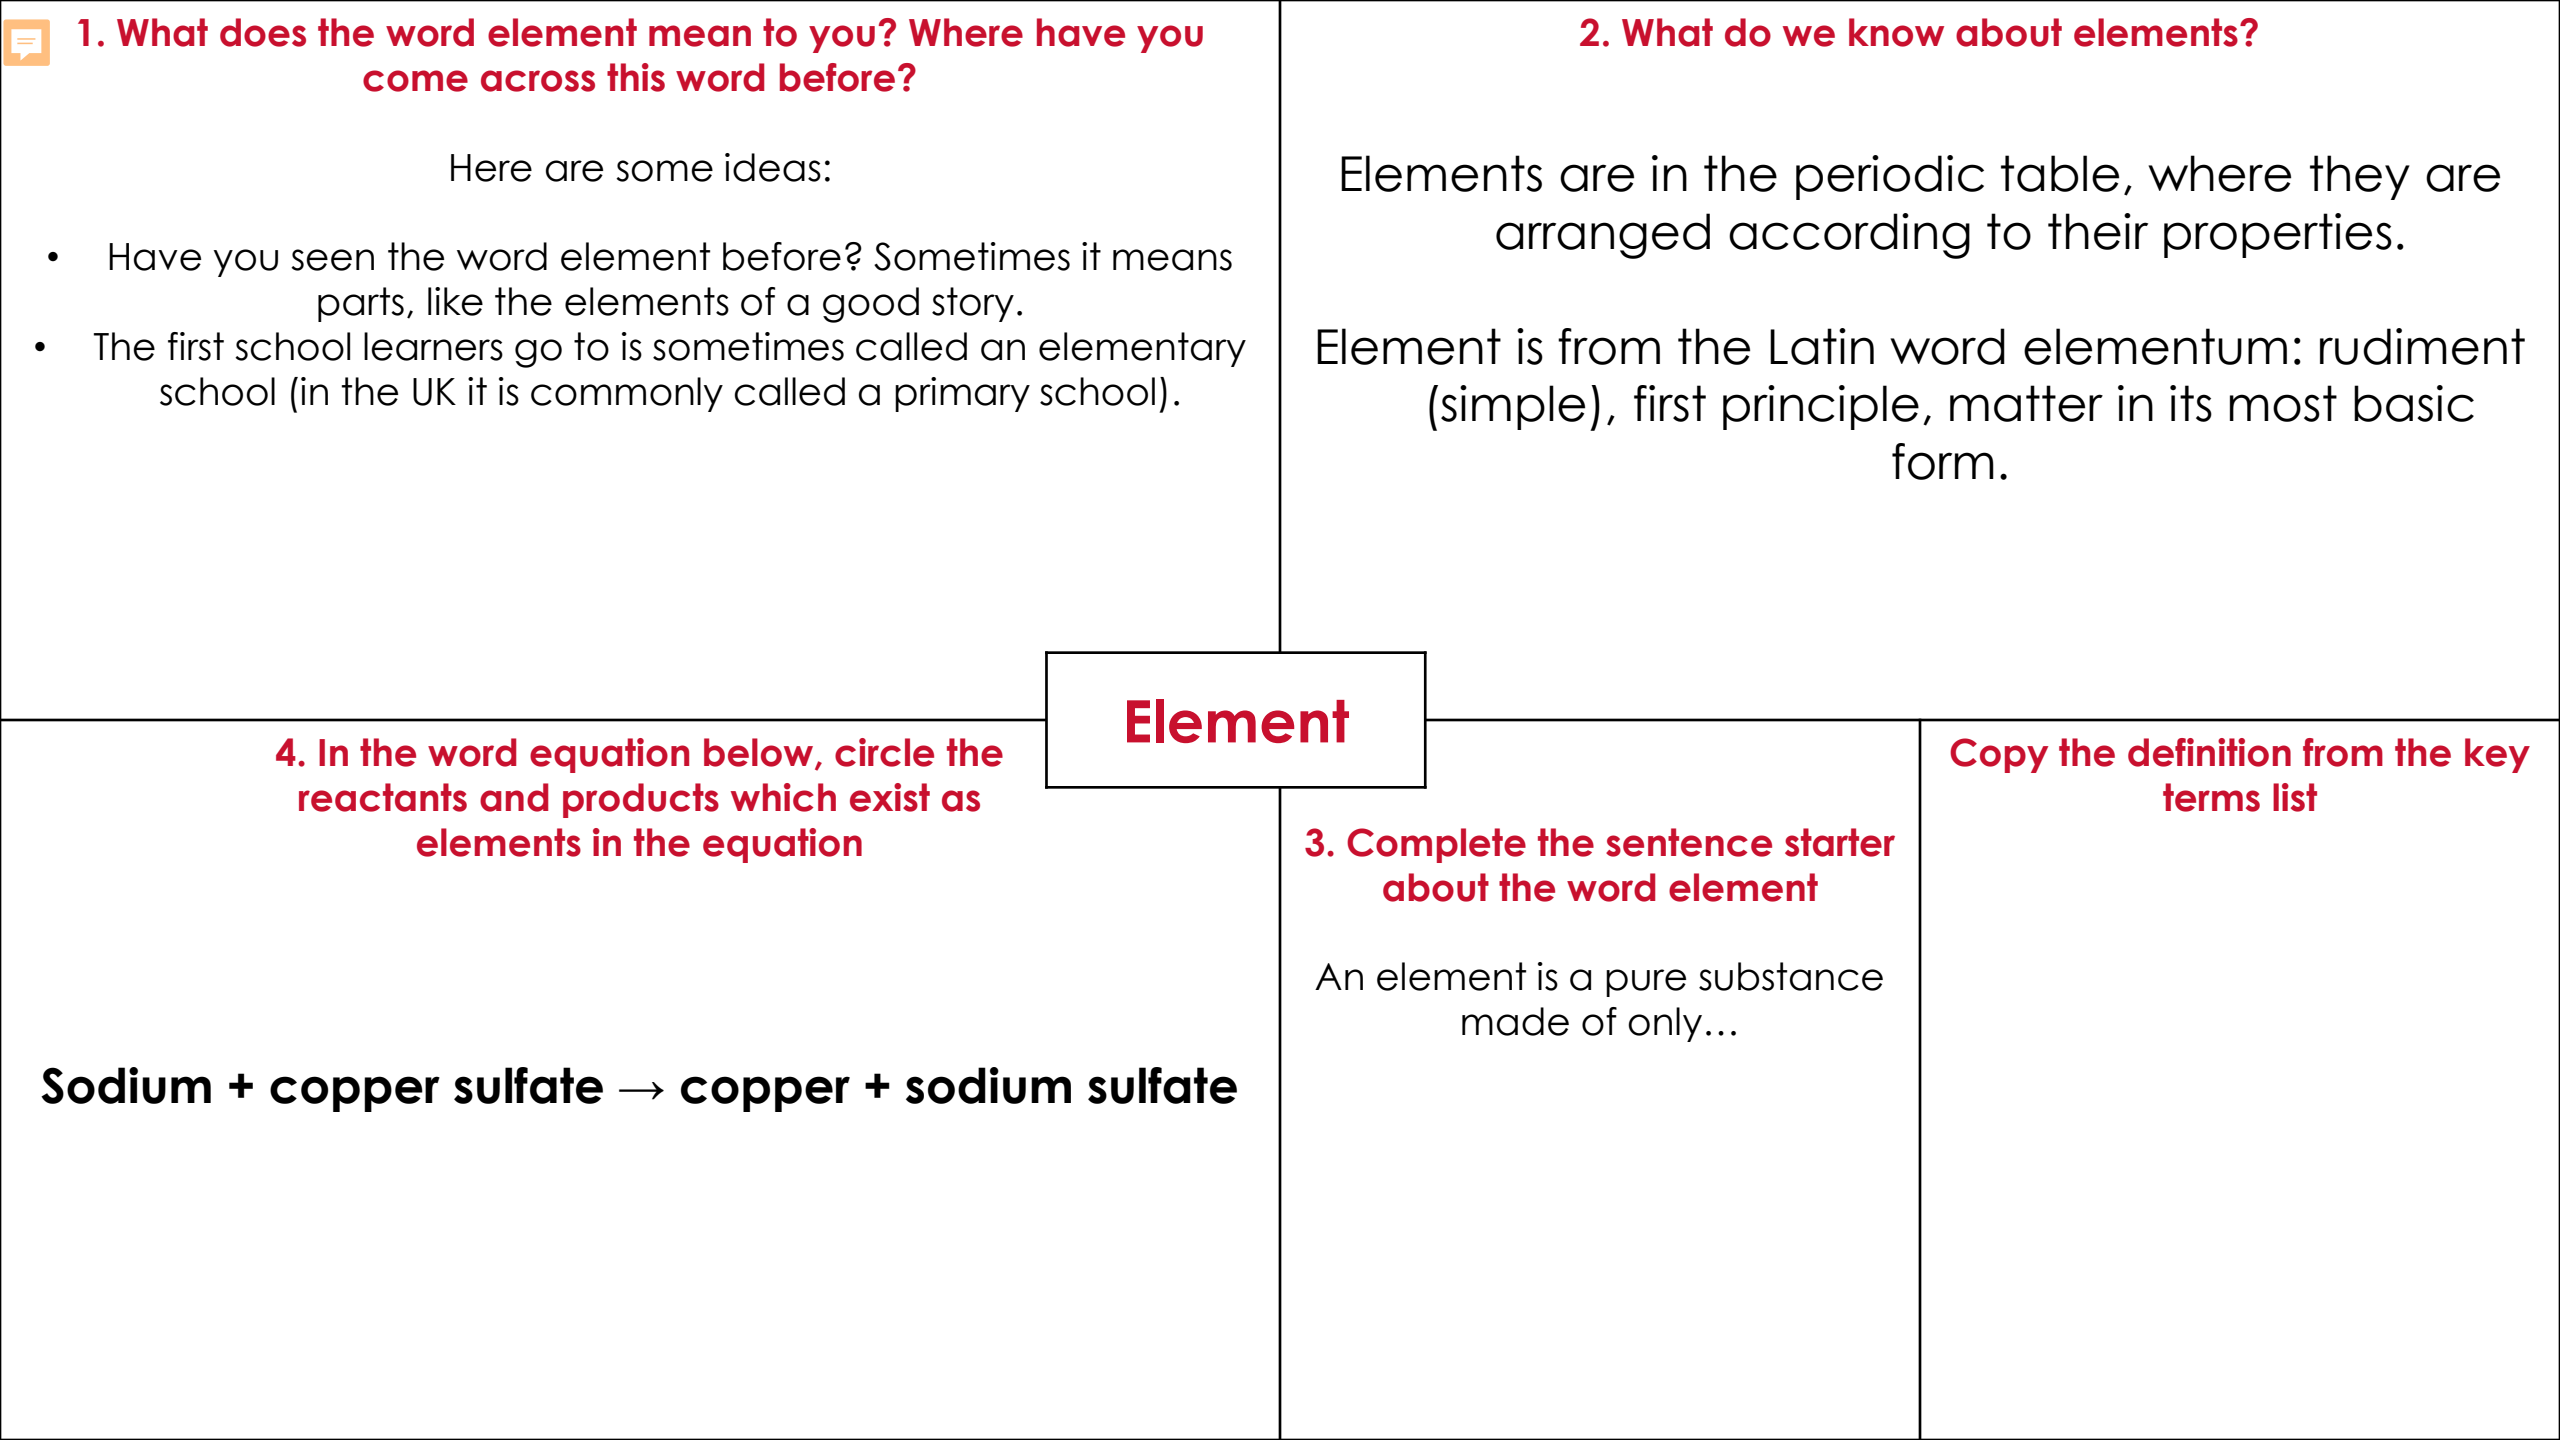

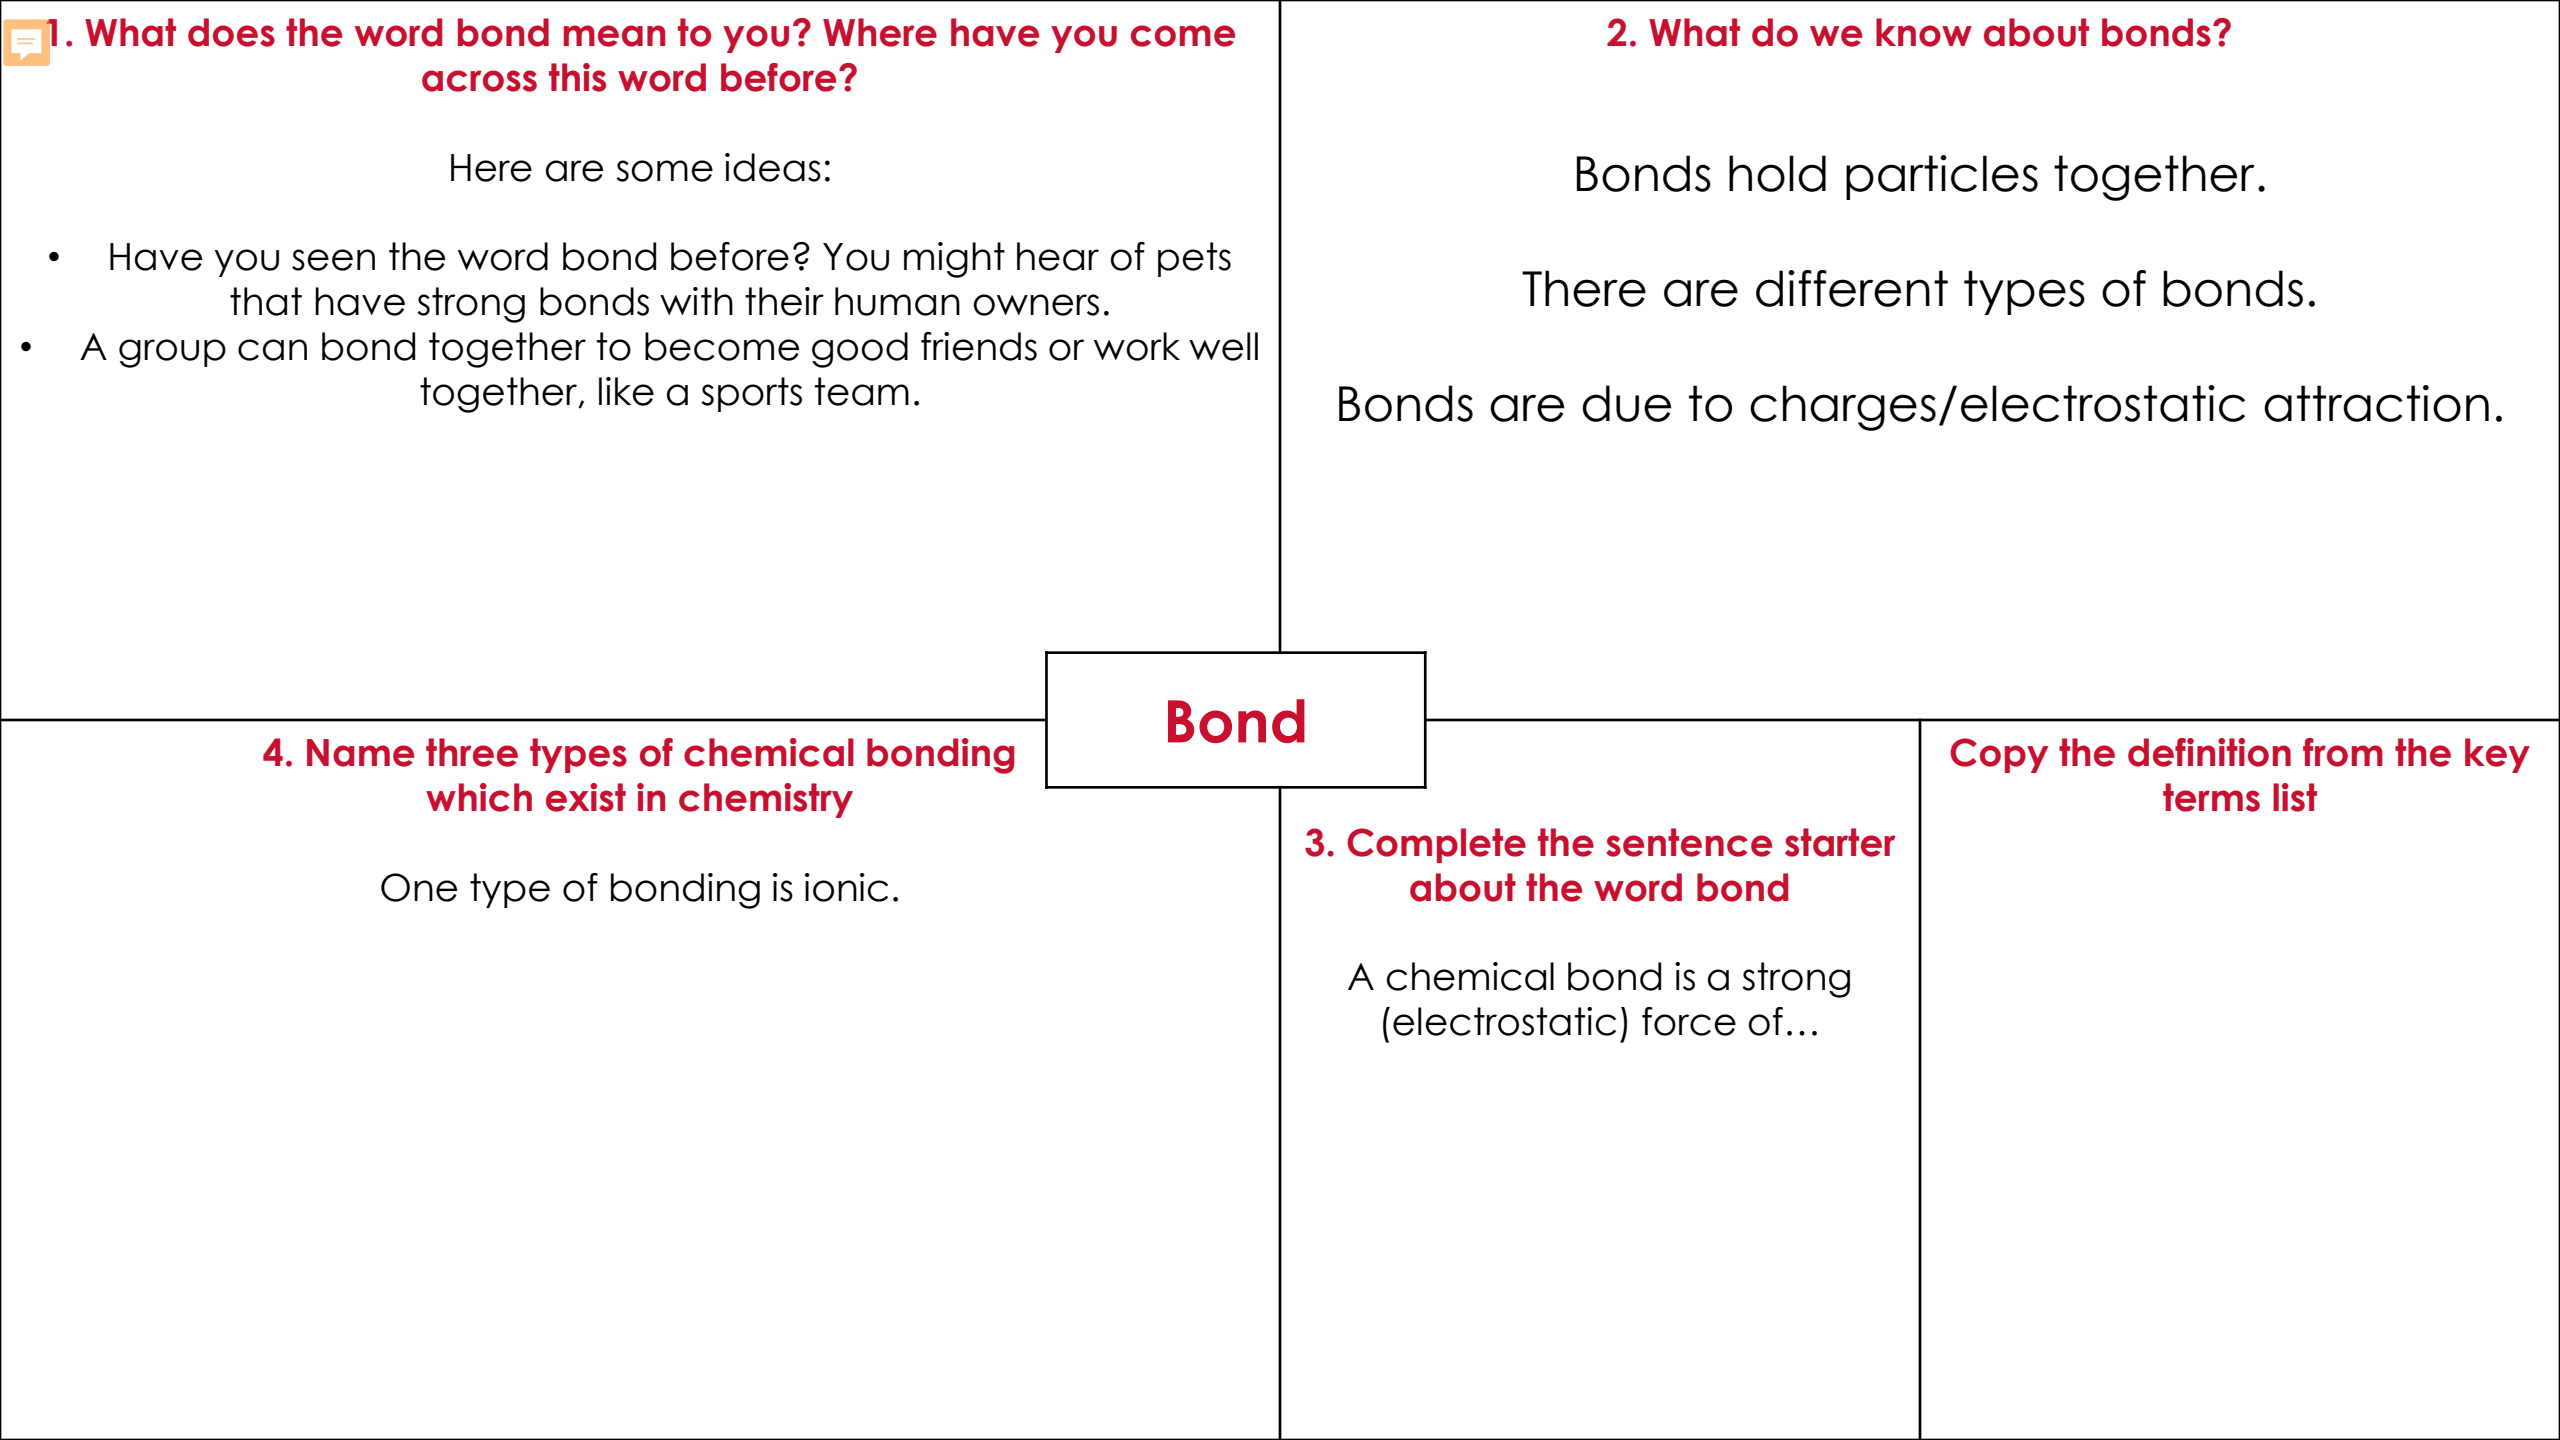

**3. Complete the sentence starter about the word molecule**

A molecule is two or more...

connected by...

**Copy the definition from the key terms list**

**1. What does the word ion mean to you? Where have you come across this word (or parts of this word) before?**

Here are some ideas:

- Protons and electrons end in 'on' and are charged.
- Have you heard the word ion before? An ionic bond is a type of chemical bond.

**2. What do we know about ions?**

Ions are charged.

Ions form ionic compounds.

Ions are attracted to opposite charges.

## **Ion**

**4. Complete the electron configuration diagram for the magnesium ion shown on the right**

The electron configuration diagram for a magnesium atom is provided on the left, to help you.

**3. Complete the sentence about the word ion**

An ion is a charged particle formed when one or more electrons are ...

**Copy the definition from the key terms list**

 1. What does the word atom mean to you? Where have you come across this word (or parts of this word) before?

2. Break down atom

A-

Not

-tom

From word 'tomos' meaning to cut

Overall meaning: uncuttable or indivisible

## Atom

4. Circle the diagram below that best illustrates a single atom of hydrogen

3. Define atom, in a chemistry context.

The smallest possible particle of an element; atoms are made up of protons, neutrons and electrons.

 1. What does the word compound mean to you? Where have you come across this word (or parts of this word) before?

2. Break down compound

com-

*With, together*

-pound

*Originally from 'position', meaning 'to put'*

*Overall meaning: to put together*

## Compound

4. Circle the boxes that contain only one compound

3. Define compound, in a chemistry context

*A pure substance made of two or more different elements whose atoms are joined by chemical bonds; the atoms are in a fixed ratio.*

1. What does the word molecule mean to you? Where have you come across this word (or parts of this word) before?

2. What do we know about molecules?

Molecule

From French word 'molécule'

Means 'extremely minute particle'

First used as a scientific word by Amedeo Avogadro in 1811

## Molecule

4. Draw a ring around the images which represent molecules below

3. Define molecule, in a chemistry context

Two or more atoms connected by chemical bonds.

1. What does the word element mean to you? Where have you come across this word before?

2. What do we know about elements?

Element

*From Latin word 'elementum'*

*Rudiment (simple), first principle, matter in its most basic form*

## Element

4. In the word equation below, circle the reactants and products which exist as elements in the equation

3. Define element, in a chemistry context

*A pure substance made of only one type of atom.*

1. What does the word bond mean to you? Where have you come across this word before?

2. What do we know about bonds?

Bond

From Proto-Indo-European word 'bhendh '

Meaning 'to bind or fasten'

Comes from the same root word as band, bandage, bandana, bundle and ribbon

**Bond**

4. Name three types of chemical bonding which exist in chemistry

Ionic  
Covalent  
Metallic

3. Define bond, in a chemistry context

A strong (electrostatic) force of attraction holding atoms together.

1. What does the word ion mean to you? Where have you come across this word (or parts of this word) before?

2. What do we know about ions?

Ion

*Meaning 'to go'*

*It is called this because ions move towards the opposite charge*

**Ion**

4. Draw the electron configuration diagram for a magnesium ion

3. Define ion, in a chemistry context

*A charged particle formed when one or more electrons are lost or gained from an atom or molecule.*

## 1. Explore

Link to science capital and draw on learners' experience.

## 2. Break down/'what do we know about X'?

Look at composite parts of the word to help unpack its meaning.

Or invite learners to suggest what, as a class, they already know about the key term (with the help of a few bullet points).

**<Select  
your key  
term>**

## 4. Consolidate

Learners apply their knowledge.

## 3. Explain

Introduce the definition.
